Examiner's Detailed Office Action

1. Claims 1-24 are allowed.
2. Examiner's note: Regarding the present application, full faith and credit has been granted the work performed by the prior Examiner.

REASONS FOR ALLOWANCE

3. The following is an Examiner's statement for reasons for allowance:
4. The closest prior art *Malcolm Wallace* and *Colin Runciman* ("*Wallace et al.*") "Haskell and XML: Generic Combinators or Type-Based Translation?" 1999 ACM, does not teach or render obvious applicant's claimed invention. In particular, as pointed out below, the prior art lacks certain features and the combination as specified in the respective claims.
5. With regards to claim 1 *Wallace et al.* does not disclose "*... describing data in a document, on the computer, in a hierarchical format utilizing the stored extensible markup language; and importing the data in the document to a genetic algorithm comprising a randomized search algorithm to define a data string or an individual in a population of points, the population of points comprising a bit string encoded to represent the data or individual.*"

6. With regards to claim 7 *Wallace et al.* does not disclose “ *... randomly generating documents on the computer, conforming to the genetic algorithm individual DTD; and providing utilities, on the computer, for performing crossover operations and/or mutation operations.*”
7. With regards to claim 14 *Wallace et al.* does not disclose “ *... randomly generating documents, on the computer, conforming to the genetic algorithm individual DTD; and providing utilities, on the computer, for performing one or more of the operators from the group comprising: crossover, mutation, permutation, editing, encapsulation, and dissemination.*”
8. With regards to claim 20 *Wallace et al.* does not disclose “ *... providing an XSL style sheet containing instruction for the genetic algorithm to construct a population of individuals; creating a population of individuals from the input data in accordance with the instructions from the XSL style sheet; randomly generating documents, on the computer, conforming to the genetic algorithm individual DTD; providing a fitness function for the individuals of the created population; and providing utilities, on the computer, for performing one or more of the operators selected from the group comprising: crossover, mutation, permutation, editing, encapsulation, and dissemination.*”
